

## Creating a Resource Inventory

---

As a farmer, producers use resources such as land, labor, machinery, breeding stock, management and financial capital to produce commodities for sale. An accurate inventory of these resources is important for the evaluation of the current health of the operation and planning. The use of an up to date resource inventory can help to:

- Complete a balance sheet;
- Provide a summary of collateral that can be used for a loan;
- Identify problems with the condition of your assets; and
- Provide information that can be used to evaluate options for growth and diversification.

Problems such as soil erosion in fields, or livestock manure stored too close to water sources may not be identified until a resource inventory is completed. Weakness in the financial situation of the business, due to excessive debt, large variable costs, or depreciation may also be found when completing a resource inventory. Furthermore, inefficiencies in human resources, labor, or time may also be found. Values should be assigned to these resources and current inventories should be maintained to make sure the operating foundation is known. Only after a resource inventory is completed, can the current health and the future direction of operation be determined.

### How do I develop a resource inventory?

---

The resource inventory of a farming operation should include all resources available and needed to carry out the goals of the operation. This list can be broken down into five areas. These five are: physical/natural, human/personnel, equipment, animal/crop, and financial resources and are discussed below.

#### Physical/Natural Resources

Physical/natural resources should include any maps detailing: land topography, range site descriptions, carrying capacities, and the location of any structures such as barns, working pens, fences, and water facilities available (not necessarily owned) to the farm. This map can either be drawn by hand or may be downloaded from several web sites that offer aerial maps of the United States.

Results from soil surveys should be included to determine the effectiveness of fertilizer applications and identify crop enterprises that could be produced on the land.

An accurate description of any wildlife and their populations will help to determine potential predators or beneficial wildlife to the operation.

The physical/natural resource inventory should also include a historical record of rainfall and weather patterns for the farm or local area. Finally, a value should be placed on the land that is owned by the farm. This value is generally the fair market value of the land if it were sold.

#### Human/Personnel Resources

Any person who works on the farm should be included in the human/personnel resources inventory. These include the farmer, family, paid full or part-time employees, custom hired operators, and any neighbors or friends that work on the farm. Along with the names of the individuals that work on the farm, the human/personnel resource list should include the assigned duties, salaries/wages, skills or talents, and work schedules for each person as well as a list of emergency personnel contacts if one of the current workers cannot perform their duties.

#### Equipment Resources

All equipment that is used by the farm should be included in the equipment resources inventory. This list should include any important information such as model or serial numbers found on the equipment and the size, age, and condition of each piece of equipment. Also, indicate if the equipment is owned, leased, or borrowed. Finally, a current value should be included for each piece of equipment. Determining the value of equipment can be done two different ways. First, a fair market value can be placed on all equipment owned by the farm. A second way to determining the value of equipment resources is by examining the depreciation schedule which should also be included with the list of equipment resources. The depreciation schedule will provide a value of the equipment that is equal to the original cost minus any accumulated depreciation.

#### Animal/Crop Resources

An inventory of animal/crop resources for a farm can be one of the easiest inventories to create. This inventory list includes all animals and/or crops that are produced by the farm or those in storage. The total number of acres along with a history of yields and government payments that are used by each enterprise (crop and/or livestock) should also be indicated.

Keep in mind that some enterprises will use the same acreage. An example of this could be cattle and corn. Corn is planted and later harvested. The corn stalks are then used as a supplemental feed for the cattle. Both enterprises used the same acreage.

Finally, a value should be placed on all livestock and crops. The value of purchased breeding stock can be determined by either subtracting the accumulated depreciation from the original purchase price (found on the depreciation schedule) or by determining the fair market value of the stock. Determining the value of

raised livestock or stored crops can be done by estimating a fair market value for these commodities if they were sold.

### Financial Resources

The final resource that should be included in a farm's inventory is the financial resources. These include any cash or savings accounts that are used by the farm as well as any debts to banks or other lenders. It is important to include with the debts: the amount currently owed, the interest rate, and the amount of time remaining on the loan. Loans used for operating year after year should also be listed along with the expected amount that will be borrowed and the expected terms. Finally, additional credit that **may be** available should also be included.

## **Conclusion**

---

Identifying all resources available to a farming operation is important when beginning the planning process. Making a complete list of all available resources makes it much easier to identify opportunities and weaknesses of a farming operation. The resource inventory should be in writing and should be updated at least once each year. After completing the resource inventory above, a full and accurate description of a farm should be complete. Only after a full resource inventory has been completed can the true health of a farm be determined.

# **Creating a Resource Inventory**

## **Lesson Plan**

---

### **I. Goals**

- A. The participant will understand the need for a resource inventory for an agricultural operation.
- B. The participant will be able to develop an inventory of their operation's five types of resources.

### **II. Lesson Highlights**

- A. An accurate inventory of resources is vital for the evaluation of the current health of the operation and planning.
- B. The use of an up to date resource inventory can help:
  - 1. Complete a balance sheet;
  - 2. Provide a summary of collateral that can be used for a loan;
  - 3. Identify problems with the condition of some of your important assets and their management;
  - 4. Provide information that can be used to evaluate options for growth and diversification.
- C. The participant must make an inventory of the five types of resources in order to do a complete job of a resource inventory.
  - 1. Identify all physical/natural resources.
    - a. Maps detailing: land topography, range site descriptions, carrying capacities, and the location of any structures such as barns, working pens, fences, and water facilities.

- b. Detailed results from soil surveys.
  - c. Wildlife species and populations.
  - d. Historical record of rainfall and weather patterns for the farm or local area.
  - e. A value of the land that is owned by the farm, which is generally the fair market value of the land if it were sold.
- 2. Identify all human/personnel resources (Any person who works on the farm).
  - a. The farmer.
  - b. Family members.
  - c. Paid full or part-time employees.
  - d. Custom hired operators
  - e. Any neighbors or friends that work on the farm.
  - f. Along with the names of the individuals that work on the farm, a list of human/personnel resources should also include:
    - i. The assigned duties.
    - ii. Salaries/wages.
    - iii. Skills or talents.
    - iv. Work schedules.
    - v. List of emergency personnel contacts if one of the current workers cannot perform their duties.
- 3. Identify all equipment resources used by the farm and should include:
  - a. Model or serial numbers found on the equipment
  - b. Size, age, and condition of each piece of equipment.
  - c. If the equipment is owned, leased, or borrowed.

- d. A current value for each piece of equipment.
- 4. Identify all animal/crop resources that are produced by the farm or are in storage. Also include:
  - a. Total number of acres along with a history of yields and government payments that are used by each enterprise (crop and/or livestock).
  - b. A value of all livestock and crops.
- 5. Identify all financial resources.
  - a. Any cash or savings accounts that are used by the farm.
  - b. Any debt to banks or other lenders along with the:
    - i. Amount currently owed.
    - ii. Interest rate.
    - iii. Amount of time remaining on the loan.
  - c. Additional credit that may be available.
- D. Who can help complete the resource inventory?
  - 1. The producer and his family.
  - 2. Lenders if necessary.
  - 3. Other experts in their respective fields.
- E. What are the benefits of creating a resource inventory?
  - 1. Determine the health of an operation.
  - 2. Complete a balance sheet.
  - 3. Compute non-cash expenses such as depreciation.
  - 4. Provide a summary of collateral that can be used for a loan.
  - 5. Identify problems with the condition of some of your important assets and their management.
  - 6. Provide information that can be used to evaluate options for growth and diversification.

### **III. Potential Speakers**

- A. Extension Agents
- B. Extension Specialists

### **IV. Review Questions**

- A. What basic reasons are there for completing a resource inventory?

Answer: Completing a resource inventory is vital for the evaluation of the current health of the operation and planning. The use of an up to date resource inventory can help: complete a balance sheet; provide a summary of collateral that can be used for a loan; identify problems with the condition of some of your important assets and their management; and provide information that can be used to evaluate options for growth and diversification.

- B. What are the five types of resources that are identified in a resource inventory list?

Answer: physical/natural, human/personnel, equipment, animal/crop, and financial resources.

**Human Resources Inventory Worksheet**

## **Creating a Resource Inventory**

### **Overheads**

---

- √ An accurate inventory of resources is vital for the evaluation of the current health of the operation and planning.
  
- √ The use of an up to date resource inventory can help:
  - 1. Complete a balance sheet.
  - 2. Provide a summary of collateral that can be used for a loan.
  - 3. Identify problems with the condition of some of your important assets and their management.
  - 4. Provide information that can be used to evaluate options for growth and diversification.
  
- √ The five types of resources that are contained in a resource inventory are:
  - 1. Physical/natural resources.
    - a. Maps detailing: land topography, range site descriptions, carrying capacities, and the location of any structures such as barns, working pens, fences, and water facilities.
    - b. Detailed results from soil surveys.
    - c. Wildlife species and populations.
    - d. Historical record of rainfall and weather patterns for the farm or local area.
    - e. A value of the land that is owned by the farm, which is generally the fair market value of the land if it were sold.

2. Human/personnel resources (Any person who works on the farm).
  - a. The farmer.
  - b. Family members.
  - c. Paid full or part-time employees.
  - d. Custom hired operators
  - e. Any neighbors or friends that work on the farm.
  - f. Along with the names of the individuals that work on the farm, a list of human/personnel resources should also include:
    - i. The assigned duties.
    - ii. Salaries/wages.
    - iii. Skills or talents.
    - iv. Work schedules.
    - v. List of emergency personnel contacts if one of the current workers cannot perform their duties.
3. Equipment resources used by the farm and should include:
  - a. Model or serial numbers found on the equipment
  - b. Size, age, and condition of each piece of equipment.
  - c. If the equipment is owned, leased, or borrowed.
  - d. A current value for each piece of equipment.

4. Animal/crop resources that are produced by the farm or are in storage. Also include:
  - a. Total number of acres along with a history of yields and government payments that are used by each enterprise (crop and/or livestock).
  - b. A value of all livestock and crops.
5. Financial resources.
  - a. Any cash or savings accounts that are used by the farm.
  - b. Any debt to banks or other lenders along with the:
    - i. Amount currently owed.
    - ii. Interest rate.
    - iii. Amount of time remaining on the loan.
    - iv. Additional credit that may be available.

√ Who can help complete the resource inventory?

1. The producer and his family.
2. Lenders if necessary.
3. Other experts in their respective fields.

√ What are the benefits of creating a resource inventory?

1. Determine the health of an operation.
2. Complete a balance sheet.
3. Provide a summary of collateral that can be used for a loan.
4. Identify problems with the condition of some of your important assets and their management.
5. Provide information that can be used to evaluate options for growth and diversification.

## **Creating a Resource Inventory**

### **Case Study Application**

---

Below is an example of a resource inventory for the case farm. Crops produced on the farm include sweet corn, onions, tomatoes, and cantaloupe. Also, the farm produces cattle from its cow/calf herd. The following resource inventory was developed to gather a better picture of the farm operation.

### **Physical/Natural Resource Inventory**

---

To begin a physical/natural resource inventory of the farm, a map of the farm was developed. Figure 1 shows that the 44 total acre farm is located at the intersection of CR 208 and FM 360. It has a purchased value of \$44,000 and an average rainfall of 35 inches per year. Thirty acres of the farm is cross-fenced, is devoted to 25 head of cows, and is at its maximum stocking capacity. Three of the thirty acres of pastureland devoted to the cattle has timber. There are two water locations available to the cattle. There are working pens located in the western portion of the 30 acre pasture. The farm also grows four acres of corn, two acres of onions, two acres of cantaloupe, and two acres of tomatoes. There is also a house with a barn located in the far west portion of the property. Finally, wildlife that can be found on the property includes: coyotes, skunks, deer, and birds.

A topography map (Figure 2) indicates the elevation of the land on and surrounding the farm. Figure 2 shows that the farm has a relatively flat elevation. There is one small hill that reaches an elevation of 260 feet above sea level located in the northern portion of the property. A small ridge can be found on the eastern side of the property, which has an elevation of 230 feet. Finally, the elevation of the farm is lower where the watering facilities are found on the farm (see Figure 1).

The final physical/natural resource inventory item for this farm is a soil test result. Soil samples to perform this test can be taken by the farmer and sent to the state agency responsible for running the test. In return, the farmer will receive a soil test result (Table 1). From this analysis, it can be seen that the farm is mildly alkaline, low in nitrate, very high in phosphorus, high in potassium, very high in calcium, high in magnesium, has no salinity, and is high in sulphur.

### **Human Resource Inventory**

---

All persons working on the farm are included in the human resource inventory. In this example farm, the people involved are presented in Table 2 and are discussed below. John Doe Sr. is the owner and farmer of the operation. His duties include: all major work on the farm; all major production decisions; and minor decision maker concerning the financial aspects of the operation. He is good at growing vegetables and managing cow herds. He draws \$13,000 per year from the farm for his family while working full time (seven days per week) on the farm. If work needs to be done or a decision has to be made on the farm and John Sr. was not available,

the first contact person would be his son (John Doe Jr.), the second contact would be his brother (Jim Doe), and the final contact would be his wife (Jane Doe).

Jane Doe is the wife of the owner of the farm. Her major duties include all major decisions concerning the finances of the farm where she excels and minor work responsibilities of the farm. She does not draw any money from the farm for her assistance and is only available in the evenings to do any work for the farm. Jane is employed by the local school district as a teacher's aide. She earns \$16,000 per year from this off-farm employment. Because her major farm responsibility is the farm finances, there is no emergency contact person at this time if she is not available.

John Doe Jr. is the 16 year-old son of the owner of the farm. He helps his dad by working about 10 hours per week on the farm after school. He makes \$5.00 per hour for working, which totals about \$5,000 per year. The emergency contact for John Jr. is John Sr.'s brother Jim Doe.

The family also includes twin nine year old daughters. Currently, they role in the farming operations is small.

Jim Doe is the brother of the owner of the farm. He helps with labor on the farm when he is needed but does not get paid. He also has a farm and grows tomatoes and sweet corn, which makes him a valuable resource for knowledge. The emergency contact for Jim is John Doe Jr.

## **Equipment Resource Inventory**

---

Table 3 shows that the farm has both owned and borrowed equipment available. Specifically, the equipment and resource inventory gives a breakdown of the equipment by name, the model number, size, age, condition, whether owned, leased, or borrowed, book value, and market value. The farm has an 80 horsepower tractor (Model # JD1940) that is 23 years old and in fair condition. It was purchased in 2000 and has a book value of \$17,500. Its current market value is \$11,000 if sold. Similarly, a 5 foot shredder (Model # JDLX4) is available to be used by the farm. It is 9 years old, in fair condition, and borrowed. Because it is borrowed, no entry is made in the book value or market value column.

## **Animal/Crop Resource Inventory**

---

A list of all crops and animals produced on the farm are listed in Table 4. The farm produces 4 acres of sweet corn that has a historical yield of 0.5 tons per acre and a current market value of \$1,333. The farm also produces two acres of cantaloupe, two acres of onions, and two acres of tomatoes. The yields are: 100 cwt per acre for the cantaloupe, 150 bags per acre for the onions, and 15 cwt per acre for the tomatoes. The current fair market values for the crops are: \$3,400 for the cantaloupe, \$7,500 for the onions, and \$1,500 for the tomatoes. Finally, no government payments have been paid to the farm for any of the crops produced.

The cattle owned by the farm are listed on the animal/crop resource inventory by ear tag number. The first 30 entries are the cows, then the bull and, finally, the next 11 entries identify the calves that have not been weaned and the associated mother cow ear tag number. For example, cow #2287 is owned by the farm and has a value of \$650. She has a calf that has not been weaned that has a market value equal to \$351.

## **Financial Resource Inventory**

---

The final resource inventory is the financial resources. In this example, the cash and savings, debt, and potential credit are identified. Specifically, the farm has \$8,500 in cash and savings. It has an equipment note with the First National Bank totaling \$15,000 that covers the purchase of the tractor. This loan has an interest rate of 6.0 percent and 4 years remain on this note. The farm also has a land note with First National Bank that equals \$22,000. The interest rate associated with this operating note is 10.0 percent. If the farm needed to borrow additional money, First National Bank would loan up to \$30,000 at 7.0 percent interest.

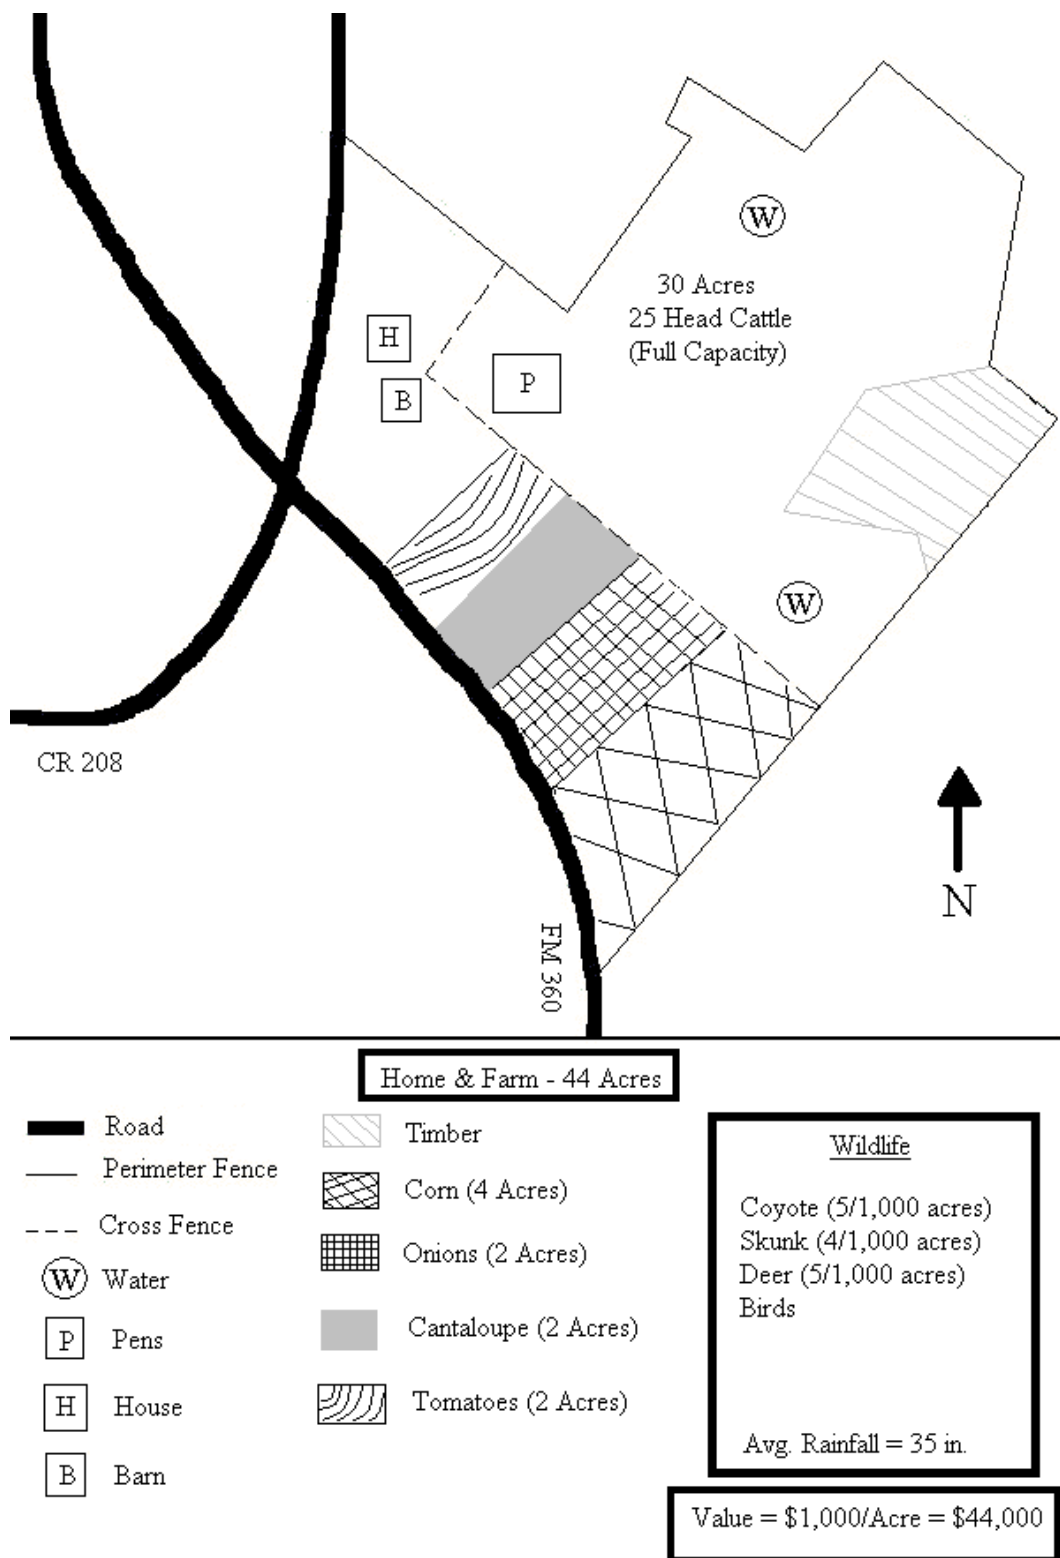

Figure1. Farm range site description

Table 1. Soil test results.

SAMPLE ID# FARM		SOIL ANALYSIS					
		SOIL TEST RATINGS – PPM ELEMENT (AVAILABLE FORM)					
PH ACIDITY	NITRATE- N	PHOSPHO- RUS	POTASSIUM	CALCIUM	MAGNESIUM	SALINITY	SULPHUR
7.1 MILDLY ALKALINE	14. LOW	622. VERY HIGH	254. HIGH	5358 VERY HIGH	217. HIGH	343. NONE	45 HIGH
(PPM x 2 = LBS/ACRE 6 INCHES DEEP)							

Table 2. Human resource inventory (as of 1/1/2002).

Name	Assigned Duties	Salaries/Wages	Skills/Talents	Work Schedules	Emergency Contact
John Doe Sr. (Farmer)	All major work on the farm. All major production decisions. Minor decision maker concerning finances.	\$12,000/year	Growing and selling vegetables, managing cattle herd.	7 days per week.	John Doe Jr. (Son) Jim Doe (Brother) Jane Doe (wife)
Jane Doe (Wife)	All major decisions concerning finances. Minor work responsibilities.	\$16,000/year from teaching	Financial Management	Evenings	N/A
John Doe Jr (Son)	Minor labor assistance.	\$5.00/hr (10 hrs/wk) (\$5,000/yr)	Strong and willing to work.	10 hrs/wk after school.	Jim Doe (Brother)
Twin Daughters	None	\$0.00			
Jim Doe (Brother)	Minor labor assistance.	\$0.00	Growing and selling vegetables (has 5 acres of tomatoes and 3 acres of sweet corn)	When needed	John Doe Jr. (Son)

Table 3. Equipment resource inventory (as of 1/1/2002).
